Senior Cloud Engineer

Atlas Technologies - Infrastructure Team - Casablanca (Hybrid)

About the role

Atlas Technologies is hiring a Senior Cloud Engineer to design, build, and operate our multi-region Azure infrastructure. You will lead cloud architecture decisions, mentor junior engineers, and partner with security and product teams to deliver reliable, scalable systems.

Requirements

- 5+ years of hands-on Microsoft Azure experience, including Azure Solution Architect level design work
- Strong experience with Kubernetes and container orchestration in production environments
- Proficiency in Infrastructure as Code using Terraform or Bicep
- Solid understanding of CI/CD pipelines (Azure DevOps or GitHub Actions)
- Experience with Python or Go for automation and tooling
- Azure Solutions Architect Expert certification preferred
- Bachelor's degree in Computer Science, Engineering, or related field
- Excellent communication skills and experience mentoring junior engineers
- Experience with observability tooling (Prometheus, Grafana, Azure Monitor)

Nice to have

- Experience in a regulated industry (finance, healthcare)
- Contributions to open-source infrastructure projects
- Familiarity with FinOps / cloud cost optimization
